

CAMBERWOOD CHILDREN'S HOSPITAL
MEDICAL IMAGING · REPORT

Patient: BYRNE, Thomas UR: 4471902
DOB: 14/03/1990 Age: 11y
Study: Bone age, left hand and wrist
Accession: CI-2001-77410
Date: 11/07/2001
Referrer: Dr Helen Nkemelu, General Paediatrics

CLINICAL DETAILS

Coeliac disease. Assessment of skeletal maturity for growth monitoring.

FINDINGS

Greulich and Pyle bone age 10 years 6 months against a chronological age of 11 years 4 months. Fusion pattern otherwise unremarkable. No focal lesion.

OPINION

Mild delay in skeletal maturity, consistent with the clinical history.
Recommend repeat in twelve months if growth velocity does not improve.

Reported by: Dr Yusuf Adeyemi, Radiologist
