

CAMBERWOOD CHILDREN'S HOSPITAL
ADOLESCENT MEDICINE · CLINIC NOTE

WHELAN, Thomas (formerly BYRNE) UR 4471902 DOB 14/03/1990
Clinic date: 19/01/2004

Seen alone at his request, with his mother waiting outside. Now 13.

Growth has caught up; height on the 40th centile. Coeliac serology remains negative on a gluten-free diet. He describes occasional deliberate dietary lapses at school "to not be the weird one at lunch", discussed at length.

Name changed by deed poll in 2003 to his mother's surname. He asked that the file be updated and that correspondence not go to the Byrne address.

He raised his father unprompted. He is aware there was a report made to the Department when he was younger and asked who made it. I told him I could not answer that. He accepted this without pressing.

Sister Aoife (UR 4471903) also under this service; seen separately.

Plan: annual review. Transition planning discussion at 16.

Dr Helen Nkemelu
